*Siena Fast Facts*

Hope you had a pleasant Fourth of July holiday! This week's *Fast Facts* will continue to look at our grade distributions, focusing specifically on grades by semester (i.e. summer, fall, spring).

The chart below shows the average term GPA by semester for the last three years for undergraduate students.

The overall pattern is very similar for the past three years. We see that there is a slight increase in average term GPA from fall to spring, while summer term GPA is significantly higher.

Next week we will continue to look at some grade data.
