Mission: Standish Library's Instruction Program expands information literacy skills required to navigate our complex information environment, empowering students to engage critically as both consumers and creators of information. In collaboration with teaching faculty across campus, librarians develop hands-on classes and asynchronous learning objects to promote Siena's culture of lifelong learners who will build a more just, peaceful and humane world.

Learning Outcomes: Information literacy instruction at Siena will strengthen a student's ability to...
1. Navigate information environments to locate sources appropriate to a given personal, social, or scholarly task.
2. Evaluate sources for contextual authority and accuracy, thinking critically about information creation and publication processes
3. Integrate sources into academic work ethically, acknowledging intellectual property according to the standards of a given discipline
4. Design research methods that embrace the iterative, humble, and inquiry-based nature of knowledge creation.
